

IMPROVING YOUR NETWORK

Northam

To ensure the ongoing safety and reliability of your electricity network, Western Power crews will be carrying out essential network improvements in Northam and a number of surrounding localities.

Work to be completed

A significant investment to replace 161 poles and approximately 14 kilometres of overhead powerline throughout Northam and the surrounding areas.

Timing

Work in these areas will commence in March and is expected to continue through to the end of the month. However please be aware that access to the network, weather conditions (such as Total Fire Bans) and emergencies can impact our work schedules.

Power outages

Keeping the community and our crews safe throughout these works is our number one priority.

Because it's not always safe to work on live lines there will be times when we will need to interrupt the power supply.

Due to the high volume of work required, some customers may experience multiple planned power interruptions.

To help you prepare we will let you know ahead of time if your home or business will be affected by these power outages.
